SYRINGE RECOMMENDATIONS

BEST PRACTICES

- Always read and follow vaccine label directions.
- Keep vaccines at 2-8°C unless otherwise stated.
- Protect vaccines from exposure to ultraviolet light.
- Check vaccine expiration dates before working cattle.
- Avoid vaccinating stressed or unhealthy animals.
- Ensure the animals are adequately restrained to facilitate correct placement.
- Maintain hygienic vaccination equipment and vaccine bottles.
- Administer the correct dose, using the proper route of administration, to the correct site.
- Dispose of needles and vaccine packaging responsibly.
- Follow manufacturer instructions on device cleaning and maintenance.

WHY PRO-BAC?

Our antigens are grown to maximize all virulence factors, eliciting a stronger immune response.

Fill the gaps other vaccines aren't covering to set your calves up for maximum performance.

Easy 2.0 mL subcutaneous (SQ) dose and ready-to-use requiring no chute-side mixing.
